

DUO-THERM® WALL-MOUNTED ANALOG THERMOSTAT

The easy-to-install Duo-Therm Wall-Mounted Analog Thermostat controls all heating and cooling systems from one convenient location. Available in three models, the unit operates automatically or manually and works with standard or ducted rooftop or basement installations.

Built for Specific Applications

Each thermostat model works with a particular RV application: a basic unit controls the air conditioner and furnace, a model for heat pumps and one for heat strips.

Easy Operation

The system switch activates cooling or heating, while the HI/LO switch selects the fan speed. The slide lever easily sets the desired temperature in Celsius or Fahrenheit. A fan switch allows selection of AUTO (blower cycles off when the set temperature is reached) or ON (blower continues to circulate air).

Over the years of running a mobile RV repair service, having a dedicated place to access service manuals for all the different appliances and components found on RVs was something that I always had a desire to create.

I hope this resource makes your RV repairs easier, as it has mine, but please be careful and follow proper safety practices when attempting to repair your own RV.

If in doubt, please consult with a professional RV technician!
